Press III then I to dial preset #1

Press III then II to dial preset #2

Press III then III to dial preset #3

Making Outbound Calls

End call press once

Receiving Inbound Calls

Answer call press once

End call press once

Duress Alerting

Send SOS Alert

Press and hold I for two seconds

SOS alarm sends a message to our control centre software know as Checkmate.

Checkmate will display both a SOS pop up notification and the GPS location of the event.

SOS Monitor Mode

Press and hold II for two seconds

SOS Monitor mode sends an alert into Checkmate, initiates an e-mail and allows the user to discretely dial into the unit without raising suspicion.

This will allow users to assess the situation.

Activate Taxi Mode

Press II twice quickly

SOS Taxi mode allows users to arm a time delay based duress measure.

Once armed the user must press button two within one minute of the unit vibrating.

Failure to press the button initiates a duress notification and GPS location within Checkmate.

Should the user fear that a situation may escalate, this mode allows automatic alerting should the user become incapacitated.
